Text Box Menu, Keyboard Commands differ

This document is provided to give a 2nd working copy of the same bug as reported in Python3docs Bugs #06, with extra information supplied.

Comment

The report (below) was made at BugZilla#164303 on Dec 12 2024. The bug was first documented at GitHub Python3Docs Bug#06 and then documented separately as Bug#06.

a) Version 24.8.3.2 (Build) is affected by this bug
b) The problem begins to show at version 7.2.3.2
   (only the most basic `Ctrl+V` Paste command was available for Text Boxes in earlier versions)
c) All later versions between 7.2 & 24.8 are affected by this bug.

original bug report:
Jump-Boxes (which are LO TextBoxes, known as "Drawing Objects" in the Navigator) will not allow some keyboard shortcuts, although the menu WILL work. Example: `menu:Edit | Paste Special | Paste Unformatted Text` DOES work, but `Shift+Ctrl+Alt+V` does NOT work; only a 'V' gets entered.

Extra comment:
The original report is accurate but has attracted zero response. Perhaps the language can be improved. These are some features to pay attention to:–

1. I've conducted a survey across all available AppImages. The results are tabulated on the last page.

2. The bug seems to have begun with Version 7.2.3.2

How to produce this document

1. This document created under 24.8.3.2.
   `menu:Help | About LibreOffice` shows: [Build](#)

2. The entire document [bug05+.odt](#) copied as this doc & then edited.

3. The last 4 pages were deleted.

4. The content on the (now) final [page#4](#) was also deleted, and a table inserted. A tally was then made within that table of the commands "Paste", "Paste Special" + "Paste Unformatted Text" both as a menu and as a keyboard command whilst in a Text Box, for each of 7 versions between 3.3.0.4 and 24.8.3.2.

5. The Jump-Box within [Bug#06](#) was copied + attached to that Table.

Demonstrations:

Refer to the final for a practical demonstration of this bug.

Things to note:–

    i. to recap:

        a) This concerns only what the <u>Python3 Document</u> refers to as *"Jump Boxes"*, what LibreOffice navigator calls *"Drawing Objects"*, and what the menu calls *"Text Boxes"*.

        b) At issue is the difference within a Text Box in efficacy between commands from the menu & those from the keyboard.

        c) I've experienced this personally with *Paste* commands.

        d) The *"Paste Unformatted Text"* command was introduced at 6.1.0.3, although not implemented for a Text Box at that time.

        e) The `Shift+Ctrl+Alt+V` command is the Keyboard shortcut for *"Paste Unformatted Text"*. All that it produces within a Text Box is the letter "V".

    ii. A copy of the word "Remove" is provided in the table to copy/paste into the Text Box. Good luck!

Example

(see next page):

Writer Version	*Paste*		*Paste Special*		*Paste Unformatted Text*	
	menu	*kbd*	*menu*	*kbd*	*menu*	*kbd*
3.3.0.4	y	y	n	n	‡	‡
4.0.0.3	y	y	0	†	‡	‡
5.0.6.3	y	y	0	†	‡	‡
6.1.0.3	y	y	0	†	n	n
7.2.3.2	y	y	2 of 5	2 of 5	y	N
7.4.7.2	y	y	2 of 5	2 of 5	y	N
24.8.3.2	y	y	2 of 5	2 of 5	y	N

Table 6.1: Menu v Keyboard Commands within Text Boxes; Efficacy Across Versions

Text for Text Box (see right margin) paste: "Remove"

Key:

y	works as planned
n	does not work
‡	unimplemented
†	no action
N	inserts the letter "v" or "V" instead of pasting
0	the menu is empty (only when in Text Box)
2 of 5	The program normally supplies 5 options, but only 2 in the Text Box

Menu:
Remove

Kbd:
V
